## Leather and Upholstery

Upholstered furniture by Lambert rounds off the seating program. In the search for suitable workshops the highest priorities were superior quality of materials and workmanship. Our suppliers are traditional manufacturers of the top category based in Europe.

## Frames

The frames are made of well-seasoned beech-, oak- or alderwood. The Lambert leather and upholstery collection is furnished with jute webbing and no-sag springs under the seat cushions.

## Upholstery and Cushions

For the upholstery we use HR-foams, so-called cold foams, with volume weights from 26 to 35 kg/m<sup>3</sup>. Usually the seat surface of the loose seat cushions is furnished with a foam rubber core and a fleece (Rhombotherm®) or with a foam rubber core and loose padding in chambers (Rhombofill®).

## Upholstery Covers

Lambert offers a large variety of covering fabrics in many different versions: short covers, long covers, covers with Velcro-closing as well as permanent covers. For the production of our leather furniture we employ aniline-dyed cowhide (dyed throughout) of highest quality exclusively.
