

# LAMBERT

## Outdoor Furniture

Lambert produces special outdoor furniture which is absolutely weatherproof. Even rough, maritime climate cannot do any harm to this robust wicker furniture that is highly versatile in use. Lambert "Sunlux" furniture sets the mood on any terrace or balcony, in summer and even in wintertime.

## Sunlux

"Sunlux" is a weatherproof, synthetic high-tech fibre made of 5000 denier-polyester yarn covered with polyvinyl chloride. When transformed into wicker furniture, this fibre presents a natural visual appeal. The tear- and weatherproof, water-repellent "Sunlux" is mainly employed for the production of outdoor furniture. This fibre has been developed following the example set by the classical loom fibre consisting of twisted paper and a metal core. In contrast to traditional loom furniture, outdoor furniture made of "Sunlux" can be left permanently out in the open. Besides the UV-resistant fibre does not fade in the sun.

## Clear advantages: naturally warm to the touch and elegant appeal of the material

Compared with conventional garden furniture made of synthetic fibre, the "Sunlux" fibre presents one more advantage: Its slightly uneven, mat surface has a rather natural appeal and it is amazingly soft to the touch. This is the result of a specific treatment of the fibre surface giving it a fine texture that makes it look like a spun thread. Another advantage: the "Sunlux" fibre is resilient, souple and affords a high seating comfort.

## Care

"Sunlux" is absolutely easy to care for and is best cleaned with some fresh water without admixture of any cleaner.
